

Entero-Mulgat Entero Mukosa-Trin

Complementary feeds with a particular nutritional purpose for horses

- Natural regulation of the digestive processes
- Good acceptability
- Simple to use

Conception/essential components*

Formulated in the form of a microemulsion (particle size 90 % $\leq 5 \mu\text{m}$) with linseed oil, dextrose, cellulose, anise oil, fennel oil, peppermint oil, cinnamon oil, caraway oil and Veyx premix „WeBarom (wormwood/valerian)“.

Cold-pressed granuled feed containing herbs such as psyllium husk, lucerne, marshmallow, fenugreek, aloe vera as well as seaweed, pectin, collagen, molasses, *Saccharomyces cerevisiae* and bentonite.

* The information given is to be understood as a general survey. The latest version of the labelling of the product is always valid.

Product features

VeyFo® Entero-Mulgat is a complementary feed for equines

- formulated with carefully selected components that meet high quality standards
- with the particular nutritional purposes

"Compensation for chronic digestive disorders of the large intestine
and compensation for chronic insufficiency of the small intestine function"

as defined in the list of intended uses of animal feedingstuffs.

VeyFo® Entero Mukosa-Trin is a complementary feed for equines

- formulated with carefully selected components that meet high quality standards
- with the particular nutritional purposes

"Compensation for chronic digestive disorders of the large intestine
and compensation for chronic insufficiency of the small intestine function"

and

"Nutritional restoration, convalescence"

as defined in the list of intended uses of animal feedingstuffs.

Natural active nutrients for regulation of the intestinal functions

VeyFo® Entero-Mulgat and VeyFo® Entero Mukosa-Trin are naturally pure products without substances damaging to the animal. They can therefore be given over long periods of time.

The careful production procedure ensures that the delicate essential oils present in the products are not compromised and are thus completely available to the body at their full level of biological efficacy. The present products have been designed by animal nutritionists and veterinarians and contain nutrients and micronutrients that help to remedy or even to avoid digestive disorders and insufficiencies. They can be easily dosed and are readily accepted by the horses.

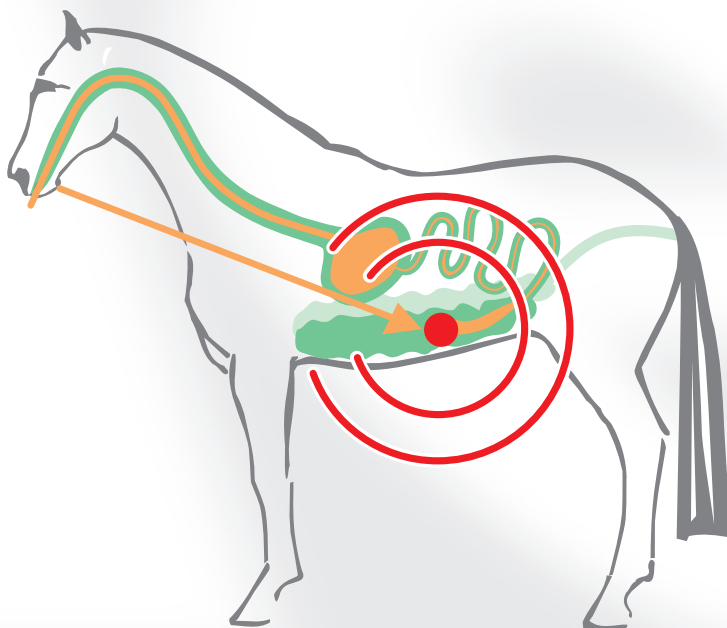

A successful combination

Easily digestible oils, fats and fibres as well as the natural ingredients contained in the herbs are essential nutrients for

- promoting the natural secretion of the glands of the digestive tract,
- avoiding the threat of convulsive spasms,
- binding toxic substances in case of undesirable kinds of fermentation.

With VeyFo® Entero-Mulgat and VeyFo® Entero Mukosa-Trin various herbal components were combined in such a way as to complement each other and thus positively counteract digestive disorders.

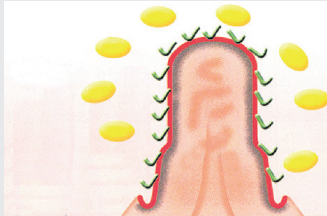

The cellulose derivative component contained in VeyFo® Entero-Mulgat and the bentonite which is an ingredient of VeyFo® Entero Mukosa-Trin bind toxins that occur and accompany undesirable kinds of fermentation in the gastrointestinal tract. Both products can be fed as a prophylactic for intestinal disorders, in case of these disorders as well as being used as an aftercare treatment.

VeyFo® Entero-Mulgat and VeyFo® Entero Mukosa-Trin supply our animals with those active ingredients and nutrients in a concentrated form that are available to the wildlife species by nature.

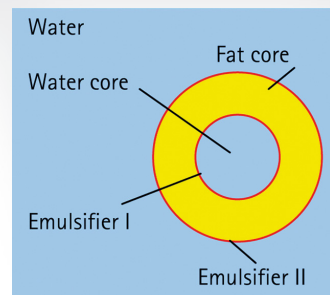

VeyFo® Entero-Mulgat: formulated as a microemulsion

VeyFo® Entero-Mulgat provides an efficient complementary feed.

The formulation of the multiple microemulsion is of outstanding importance in this connection. It ensures the undamaged passage of important nutrients and micronutrients into the small intestine and their perfect dispersal over the whole area of the gut mucosa.

Emulsification means the break-up of liquids (i.e. oils or water) and the active nutrients dissolved therein into tiny droplets possessing a minute diameter (1 – 3 μm). In order to ensure that these minute droplets with the fat-soluble nutrients are held inside and the water-soluble components stored around the droplet do not separate out once again a herbal emulsifier has to be added.

Thus emulsification means an extraordinary large increase in the effective surface area. Hence, for the efficacy of the emulsion it is highly important that

- it remains stable in the stomach until absorption occurs in the small intestines,
- it contains an emulsifier that can be metabolised and is absolutely harmless,
- no loss of nutrients and micronutrients occurs through the emulsification and the concomitantly high absorption capabilities of the components,
- absorption also remains assured during fat metabolism disorders,
- above all, that those substances that tend to accumulate in the liver will not exert additional stress.

VeyFo® Entero Mukosa-Trin: a gently granulated feed

VeyFo® Entero Mukosa-Trin is being granulated in a special cold press process below 40 °C. Both the gentle processing and the special vacuum packaging ensure full effectiveness of the active ingredients and essential oils contained in the herbs.

Factors influencing the stability of the vitamins			
Vitamin	Temperature	Oxygen	Humidity
C	++	++	++
D ₃	+	++	+
E	0	+	0
K ₃	+	+	++

++ = strong influence
+ = average influence
0 = no influence

The cold press process has a direct impact on the factor temperature, whereas the vacuum packaging regulates oxygen and humidity of the granules.

The excellent blend of herbs, alongside with the particular structure, ensures that the food is readily accepted by the horses and positively influences resorption in the gastrointestinal tract.

When properly handled, the vacuum packaging ensures minimum loss of the essential oils as well as a long shelf-life of the product.

Owing to the formulation with dried granules, no soaking of the food occurs.

Recommendations for use and dosage

VeyFo® Entero-Mulgat

The complex causes of intestinal problems in horses, especially colic syndrome, are keeping horse owners and veterinarians busy. In almost all cases poor husbandry and feeding errors are the trigger for digestive disorders. Subsequently, disorders of the intestinal peristalsis through to intestinal spasms occur.

VeyFo® Entero-Mulgat is a complementary feed designed to support the function of the digestive system in horses and to combat digestive disorders.

During the recommended initial period of feeding of up to 6 months it is recommended to give 5 to 25 ml per animal and day independent of their life weight. The feeding and the duration of feeding should always be done in consultation with a veterinarian. An expert's advice is a basic requirement for successful nutrition and hence a problem-free intestinal function.

The sudden occurrence of a disorder of the intestinal function with colic symptoms demands rapid counteractive measures by the veterinarian. This can occur in the stable, but also at a competition or during a leisure ride.

VeyFo® Entero-Mulgat provides a natural product to cover the time until the veterinarian's arrival by already stimulating the secretions from the glands in the gastrointestinal tract shortly after feeding and thus countering the threat of serious functional disorders. In this case, 50 ml (half a dosage cartridge) are given to horses of any weight. Feeding can be repeated as required.

VeyFo® Entero-Mulgat is either given directly or via the feed.

Feeding regime	Short-term feeding in case of suddenly occurring disorders (emergency cases)	Long-term feeding up to 6 months
Horses of any age and weight receive	50 ml (half a dosage cartridge) Feeding can be repeated as required	5 to 25 ml per animal and day

VeyFo® Entero Mukosa-Trin

The granular feed manufactured in a special cold press granulation process (< 40 °C) sustainably supports and protects the intestinal mucosa in stress situations and reduces fecal water through the large capacity of psyllium husk to bind water. The combination of marshmallow and seaweed has a soothing effect on the gastrointestinal tract.

VeyFo® Entero Mukosa-Trin is a complementary feed providing anti-inflammatory qualities that exerts positive effects on the physiological gut mucosa owing to the pH lowering humic acids.

The product can be given an empty feeding trough or mixed with feed.

Nutritional purpose	Compensation for chronic digestive disorders of the large intestine Compensation for chronic insufficiency of the small intestine function	Nutritional restoration, convalescence
Species Horses Foals	 5 g/100 kg BW, several times a day if needed 25 g – 50 g, several times a day if needed	 Twice daily up to 100 g (200 g per day) Twice daily up to 50 g (100 g per day)
Recommended feeding duration	Preventive and to support the regenerative processes of the gastrointestinal tract: feeding up to 6 months	In case of diarrhoea: feeding up to 1 week until restoration, subsequently regenerative feeding dosage

1 measuring cup = 70 g

High performance animals require optimised feeding regimes. We want you to be successful and do our utmost to achieve this target.

All constituents contained in the products are well known in animal nutrition. They are also used as nutritional supplements in humans. The quality and processing meet the highest purity criteria thus achieving a long shelf-life as well as a trouble-free application.

Package sizes

VeyFo® Entero-Mulgat
100 ml cartridge doser

VeyFo® Entero Mukosa-Trin
2.5 kg bucket, vacuum-packed, with dosing device

Notes

Store out of the reach and sight of children. Protect from light.

Shelf-life: Original packages sealed and stored at temperatures not above 20 °C: 24 months from manufacturing date. Re-sealed packages after initial opening at least 6 months. See label for storage instructions.

In order to achieve a clear separation from our veterinary medicines and care products, all our dietetic and complementary feed specialities that are subject to the feedstuff law – as the present products – are exclusively marketed and labelled under the umbrella brand "VeyFo®". They are no medicinal products and need not to be entered into the stable treatment diary.

Attention:

No need to be entered into the equine passport.

Contains substances that are not compliant with EADCMR, thus unintentional doping might be possible.

The information given in this catalogue sheet corresponds to the state of knowledge upon completion. Please read the product information carefully before using the product.
