

Horn Pads

Sealed packets containing
special fleece matting
saturated with Al Co Cid liquid

- For hoof and claw

- Treatment of holes, cracks and crevices in the frog region

Ingredients (INCI)

Oily formulation containing glycerine, copper sulfate, aqua, potassium alum, colorant CI 42051

Product characteristics

Our horses and cattle have to be mobile in order to remain healthy.

Cracks in the hoof or claw horn, holes caused by stone incursion and splintering of the load bearing wall lead to infections of the hoof (inducing the hollow wall or seedy toe syndrome) and impair mobility. White line disease, putrefying pathogens in holes and crevices or horse thrush can destroy the horn and its cohesion and must be reliably fought. These defects are not diseases in a medical sense, but are problems concerning hygiene and horn growth.

With hoof and claw problems it is essential on the one hand to halt the destruction of the horn through putrefying bacteria and on the other to promote the rapid growth of healthy horn tissue.

Functions

Special fleece matting saturated with Al Co Cid liquid for the cleansing and natural disinfection of the holes, cracks and crevices in the regions of the frog

- Deodorisation, reliable destruction of bacteria and fungi including putrefying pathogens
- Care product promoting the regeneration
- Easy to administer
- Providing reliable aid
- An absolute must with thrush to be pressed into the affected cracks and crevices
- For the regeneration and securing of normal physiological horn functions

The oily saturated fluid does not dry out, penetrates the cracks and crevices ensuring the reliable and sustainable destruction of bacteria and other putrefying pathogens.

Application

Take the saturated fleece from the sealed package and press it into the affected hoof sites, holes or cracks. Pieces of fleece can be cut to the required size using scissors.

SanDitan® Horn Pads can also be applied under the horseshoe or hoof/claw boot. They facilitate active respiration and thus allow unimpeded access for the oxygen to reach the affected site. The embrittlement of the surrounding horn regions is avoided by the oily saturated fluid. It effectively repels water on contact.

Package size

Box of 25 sealed packets
